

Special Issue

Economic Pest Thrips: Biology, Ecology, and Population Genetics

Message from the Guest Editors

Thrips, as the species of the Insect Order of Thysanoptera are usually called, have captivated the attention of applied entomologists in recent decades as several of them have been recognized as major harmful insects to the main crops in horticulture, floriculture, and open field orchards. Moreover, the intensive global trade is favoring their spread, and many polyphagous thrips are now being recorded as quarantine species. This Special Issue will focus on recent studies and review key subject areas in thrips biology and ecology, as well as molecular support to species identification and genetics studies of natural populations, in order to provide further knowledge for their control.

Guest Editors

Dr. Rita Marullo

Dr. Gregorio Vono

Dr. Carmelo Peter Bonsignore

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
