Ecology of Ticks and Their Control

Message from the Guest Editors

In the United States, tick-associated diseases are increasing, native tick species are expanding their geographic range, and exotic ticks pose an additional human or veterinary health concern. The CDC estimates that there are over 300,000 human cases of Lyme disease in the U.S. each year, along with increasing incidence of other tick-borne diseases. Key issues related to ticks include knowledge gaps related to tick distribution, changing tick ecologies, human exposure or risk factors, and best practices to manage or control exposure to human-biting ticks. This Issue brings together a diverse field of researchers addressing some of these important questions related to tick ecology and control.

Guest Editors

Dr. Kirby C. Stafford III

Dr. Scott C. Williams

Dr. Megan A. Linske

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
