

Special Issue

Printed Devices for Industrial and Medical IoT

Message from the Guest Editors

In the near future, there will be a strong demand for sensors and IoT devices integrated on any object with arbitrary size and shape in order to provide new and improved instruments. In this frame, innovative manufacturing technologies, such as printed electronics and additive manufacturing, represent a viable solution for the design and fabrication of such devices and instruments, and to embed them on different 2D and 3D substrates. These technologies are modernizing many application fields such as wearable devices, Industry 4.0, and IoT thanks to their ability to recognize both physical and chemical quantities that facilitate the better monitoring of human health and industrial production processes. In fact, printed electronics offer techniques for the production and integration of unconventional sensors and electronic systems or to make conventional objects "intelligent". Consequently, this Special Issue encourages the presentation of integrated devices and sensors produced by additive manufacturing technologies (e.g., screen printing, inkjet printing, aerosol jet printing, etc.) for industrial and biomedical applications.

About the Journal

Message from the Editor-in-Chief

The realization of dedicated instrumentation has always been a collateral aspect of experimental research. In addition, many groups dedicate efforts and resources solely to the development of new devices, sensors, equipment and large infrastructure, theoretical and numerical studies, and novel experimental methodologies. With *Instruments* we wish to address both established and emerging communities, also to favor the creation of innovative trans-disciplinary approaches. We see *Instruments* as an exciting high-impact journal that will soon hold a leading position in disseminating cutting edge scientific and technological research.

Editor-in-Chief

Prof. Dr. Antonio Ereditato

Enrico Fermi Institute, The University of Chicago, Chicago, IL 60637,
USA

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, Inspec, CAPIus / SciFinder, INSPIRE, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.1 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
