

Special Issue

Photovoltaic Array Management

Message from the Guest Editor

The use of solar energy sources is increasing and will play an important role in future power systems. As the core component of a solar power station, effective management of photovoltaic array affects the safe and stable operation of the entire system. With the advancement of photovoltaic technology, the requirements for the refined design of photovoltaic arrays are becoming higher and higher; for different modules and inverters, optimized module arrangement and wiring can reduce investment costs and increase system power generation. In this Special Issue, we invite contributions to report the state-of-the-art developments in the fields of photovoltaic array management, including optimal configuration, temperature rise, mismatch, hot spot, multipeak output characteristics, array cleaning, non-uniform aging, fault diagnosis, power quality, applications of AI with regard to photovoltaic array, etc. However, special topics are not limited to the aforementioned ones.

About the Journal

Message from the Editorial Board

The unique journal *Inventions* is different from all other journals. Many scholars spend their lives publishing research papers in many different journals, but most of these journals do not help scholars collate and analyze their results or assist in promoting them to a relevant industry. However, *Inventions* will help authors not only to publish their papers in the journal, but also to promote their research results to industry and assist them in realizing the purpose of technology transfer. In the future, *Inventions* will help authors to evaluate their technology license fees based on the valuation theory and approaches and also help authors to show their patents and technologies on a network transaction platform.

Editors-in-Chief

Prof. Dr. Chien-Hung Liu

Department of Mechanical Engineering, National Chung Hsing University, 250 Kuo Kuang Rd., Taichung 402, Taiwan

Prof. Dr. Shouu-Jinn Chang

Department of Electrical Engineering, National Cheng Kung University, Tainan 701, Taiwan

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, Ei Compendex and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.8 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
