Risk Stratification and Long-Term Outcomes after Cardiac Surgery

Message from the Guest Editor

Risk stratification plays an important role in cardiac surgery, where multivariable models are used to assess the clinical outcomes in an objective risk-adjusted manner. It is widely known that in-hospital adverse events represent only one aspect of the periprocedural outcome. The early post-discharge period (first months after discharge up to one year postoperatively) represents a very important time interval because adverse events and complications directly related to the surgical procedure may also occur during this period. Furthermore, the mid-term period (up to 5 years) could be an ideal time interval to extract conclusive and safe results for the outcome of a surgical procedure. Finally, long-term follow-up (10 years or more) is needed in some cases to determine the efficacy of the surgical procedure, and to compare the outcome with the general population. The aim of the present Special Issue is to further the development and validation of risk stratification models for the prediction of long-term outcomes after cardiac surgery. Such predictive models will assist clinicians and surgeons in objective decision making.

About the Journal

Message from the Editor-in-Chief

The primary goal of the *Journal of Cardiovascular Development and Disease* (JCDD, ISSN 2308-3425) is to provide cardiovascular scientists a platform to publish their work in a quick and efficient way. Topics can range from studies designed to decipher the events underlying early heart development to studies focusing on the origins of congenital and acquired heart disease. Papers submitted to *JCDD* undergo a fast, yet thorough, peer-review process. In this process, we will apply strict ethical policies and standards. *JCDD* guarantees fast dissemination of results to a large scientific audience.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cardiac and Cardiovascular Systems) /
CiteScore - Q2 (General Pharmacology, Toxicology and
Pharmaceutics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 24.7 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the second half of 2025).
