

## Special Issue

# Recent Progress in Cardiovascular Epidemiology

### Message from the Guest Editor

Big data analytics have revolutionized the field of cardiovascular disease epidemiology by allowing researchers to analyze vast amounts of data from multiple sources, such as national population-based longitudinal cohort studies, risk- and disease-outcomes-focused surveillance systems, electronic health records, administrative claims data, genetic data, and environmental data. Sex-specific risk prediction models for heart failure (HF), peripheral arterial disease (PAD), and stroke subtypes are particularly welcome in this specific issue. These new models are expected to combine traditional risk factors, novel biomarkers, genetic information, and robust modeling approaches.

## About the Journal

### Message from the Editor-in-Chief

The primary goal of the *Journal of Cardiovascular Development and Disease* (JCDD, ISSN 2308-3425) is to provide cardiovascular scientists a platform to publish their work in a quick and efficient way. Topics can range from studies designed to decipher the events underlying early heart development to studies focusing on the origins of congenital and acquired heart disease. Papers submitted to JCDD undergo a fast, yet thorough, peer-review process. In this process, we will apply strict ethical policies and standards. JCDD guarantees fast dissemination of results to a large scientific audience

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cardiac and Cardiovascular Systems) /  
CiteScore - Q2 (General Pharmacology, Toxicology and  
Pharmaceutics)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 28.8 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
