Message from the Guest Editors

In recent years, there have been significant therapeutic advances in the management of bone fractures, from diagnostic methods to the ongoing optimization of fracture healing, as well as the rehabilitation of patients returning to work.

This Special Issue on “Clinical Therapeutic Advances in Bone Fractures” is dedicated to showcasing innovations in the treatment of bone fractures. These approaches to bone repair include biological methods such as bone morphogenetic proteins or stem cells, as well as orthobiologics like bone substitutes that provide scaffolding for new bone formation and aid in fracture stabilization. Additionally, biomechanical enhancements, minimally invasive surgical techniques, and enhanced rehabilitation protocols can optimize functional recovery and prevent complications such as fracture-related infections, nonunion, and functional deficits. Furthermore, the utilization of molecular diagnostics and technological innovations such as 3D printing for the creation of patient-specific implants and scaffolds allows clinicians to improve the precision and effectiveness of fracture fixation and bone regeneration.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
