Message from the Guest Editors

Dear Colleagues,

Recent advances in diagnostic procedures and therapeutic interventions in Multiple sclerosis have substantially improved disease management and outcome. During the last decade, diagnostic criteria have been refined and allowed an earlier diagnosis, while preclinical conditions such as radiologically isolated syndrome, have been extensively studied. Current research explores the feasibility of the use of advanced neuroimaging techniques and blood biomarkers such as the levels of neurofilament light chains, in clinical practice. Future perspectives include the implementation of digital monitoring tools in everyday clinical practice that may allow early detection and prevention of disease worsening.

This Special Issue of the JCM seeks commentaries, case reports, original research, short reports, and reviews focusing on the advances in research, diagnosis monitoring and treatment of multiple sclerosis and other demyelinating disorders such as neuromyelitis optica and MOG-associated diseases. We aim to provide information about advances in phenotyping people with demyelinating disorders, personalization of treatment and long-term monitoring of these disease entities.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPUS / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
