### Message from the Guest Editor

Dear Colleagues,

Acne, rosacea, and hidradenitis suppurativa (formerly called acne inversa) are skin diseases which share similar features such as redness, papules, nodules. All can result in reduced self-esteem, anxiety, and depression.

With the recent advent of molecular biology and next-generation sequencing (NGS), knowledge on the skin microbiota in these skin conditions has grown exponentially. Additionally, the potential involvement of insulin-like growth factor (IGF)-1 has been suggested in acne, rosacea and hidradenitis suppurativa which opens the possibility for new treatment. Biologics and JAK-inhibitors are also a promising option and should be further examined.

We herein welcome papers which provide exciting new insights on acne, rosacea, and hidradenitis suppurativa.

## Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
