Message from the Guest Editor

Dear Colleagues,

The aging process is not programmed to be a disease, but some age-related changes occur during the lifespan at many levels. These changes carry with them an increased risk for a number of age-related diseases and degenerative conditions in humans. In the context of extension in one's lifespan, it is crucial to better understand all these factors and interactions that place people at an increased risk for pathological aging and limit the recovery after a lesion. Evidence suggests that a multidisciplinary approach to diseases is needed in order to improve quality of life. The disease response to therapeutic interventions interacts with: (i) social and behavioral factors such as environmental exposure, healthy or unhealthy behaviors, social relationships; and (ii) associated comorbidities. This Special Issue aims at presenting recent advances in the development of new interventions, starting from molecular interventions all the way environmental/social or rehabilitation strategies, including the mechanisms through which these factors exert their beneficial effects on age-related diseases.

Message from the Editorial Board

Journal of Clinical Medicine (ISSN 2077-0383) is an international, peer-reviewed, open access journal dedicated to advancing clinical and preclinical research. Our Editorial Board and staff are committed to delivering cutting-edge, timely, peer-reviewed articles spanning the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and impactful research articles, as well as reviews that are clinically significant and relevant to the full spectrum of medical disciplines. All full texts are archived in PubMed Central and indexed in SCIE (Web of Science), Scopus, PubMed, and other major databases. We invite you to submit your manuscript for publication, as well as join our community as a reviewer or reader online.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
