Message from the Guest Editor

Dear Colleagues,

Diabetes mellitus is associated with the development of chronic complications as a result of long-term exposure to hyperglycemia. Besides, other metabolic disturbances, especially type 2 diabetes, contribute to an increased risk of chronic complications. In fact, these complications have an important impact on the quality of life and life expectancy. Therefore, one of the main goals of diabetes treatment is preventing or delay in the appearance and progression of the different complications.

Traditionally, in daily practice, clinicians classify these complications into two types depending on the size of the affected vessels, i.e., microangiopathy and macroangiopathy. However, in recent years, it's evident that diabetes leads not only to vascular complications but also with other complications like non-alcoholic fatty liver disease, cardiomyopathy, dementia, and an increased incidence of different types of cancer.

The current Special Issue invites clinical researches related to any clinical aspects of the natural history, epidemiology, prevention and management of chronic complications of diabetes mellitus.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
