### Message from the Guest Editors

Pelvic organ prolapse is a prevalent disorder with a high lifetime incidence of surgical repair, its surgical treatment having greatly evolved over the past years with pelvic floor reconstructive surgeons now faced with a vast array of treatment options for their patients. Pelvic reconstructive surgery for POP can be subdivided into numerous different classifications and types of procedures, first being an anatomic classification by compartment (anterior, posterior and/or apical). The type of approach may be transvaginal or abdominal, with the latter feasibly performed by open, laparoscopic or robot-assisted laparoscopic techniques. If an apical prolapse is present, a decision as to whether or not to perform a hysterectomy must be determined. Finally, the reconstruction may be performed with or without mesh for added support, both through transvaginal and abdominal routes. In the present Special Issue, we present an overview of each technique, focusing our interest on the most popular and controversial current trends in pelvic reconstructive surgery as well as presenting the most recent approaches and techniques.

## Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Medicine, General & Internal*) / CiteScore - Q1 (*General Medicine*)
