Message from the Guest Editors

The practice of genitourinary surgical reconstruction is challenging and rapidly changing. Techniques are constantly evolving to improve outcomes. Our mental plan for a particular surgery can change intraoperatively and different skills are needed to perform these operations.

Surgery to restore normal function by repairing, rerouting, or recreating areas of the upper or lower urinary tract and genitalia is not enough. Furthermore, we are now paying more attention to patient-reported quality of life. In addition, the milestones in regenerative surgery, biotechnology, and new materials have not been completely translated into clinical practice.

The aim of this Special Issue is to highlight recent advances in the context of diagnosis, treatment, and prognosis for various genitourinary reconstructive procedures.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Medicine, General & Internal*) / CiteScore - Q1 (*General Medicine*)
