closed (30 September 2018)

Message from the Guest Editors

Knowledge of the mechanisms that underlie the development of multiple sclerosis (MS) is important for appropriate therapeutic interventions. However, the initiating events that lead to MS are still unknown, and the relative merits of “outside-in” (i.e., autoimmune) vs. “inside-out” (i.e., primary central nervous system damage) models for development of MS have been debated. Genetics undoubtedly play an important role in susceptibility to MS, but the relative contribution of individual genes remains to be determined, and little is yet known of genes that affect the course of disease. Female gender is one of the major risk factors for MS, but, conversely, some uniquely female events such as pregnancy are protective in MS. Environmental factors (diet, gut flora, stress, exposure to chemicals, toxins or UVB) are also likely to influence the pathogenesis of MS. Even cell types once thought to be of little interest in MS (e.g., neutrophils, platelets) are now being proposed as important players in development of disease. The present Special Issue aims to explore these potential pathogenic mechanisms in more detail.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
