Message from the Guest Editor

Dear Colleagues,

Metabolomics, one of the established *omics* technologies, has been utilized to understand the metabolic pathways in various cells. This method enables us to evaluate systemic health status and metabolic diseases through high-dimensional metabolomics data.

This Special Issue aims to provide an update regarding the current topics in metabolomics related to health and diseases. Therefore, we would like to invite original research, state-of-the-art reviews, and viewpoints. In particular, we would like to encourage the submission of manuscripts covering biomarker discovery, mechanism elucidation, technology development, and data analysis.

We look forward to your submissions!

Prof. Dr. Masahiro Sugimoto
