

Multimorbidity Development and Evolution: Clinical Implications

Guest Editors:

Dr. Davide Liborio Vetrano

Postdoctoral Fellow at the Aging Research Center, Department of Neurobiology, Care Sciences and Society, Karolinska Institutet, Stockholm, Sweden

Dr. Amaia Calderón-Larrañaga

Assistant Professor at the Aging Research Center, Department of Neurobiology, Care Sciences and Society, Karolinska Institutet, Stockholm, Sweden

Deadline for manuscript submissions:

closed (30 April 2021)

Message from the Guest Editors

Research on multimorbidity is regaining ground more than two decades after its origin. The growing number of individuals suffering from multiple chronic conditions undeniably challenges clinicians and healthcare systems. The complex and heterogeneous nature of multimorbid patients is at the core of an endless number of clinical phenotypes, hampering any attempt to reliably predict negative health-related events.

Lately, the adoption of new operationalization models, the implementation of powerful statistical approaches, and the availability of longitudinal, comprehensive population-based data, have paved the way for a new generation of promising studies. The recognition of the clinical value of multimorbidity patterns and the biological relevance of measuring the speed of disease accumulation over time reflect recent trends to uncover the biological basis of multimorbidity, and to translate these findings into better prevention, treatment and prognosis of patients with multimorbidity.

Considering your expertise in the field, we would like to kindly invite you to contribute with an original paper or a literature review to the Special Issue of the JCM.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPUS / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
