Message from the Guest Editor

This Special Issue aims to update the current clinical approaches with new innovative advances and knowledge in the field of dentistry. Potential topics in this Special Issue include but are not limited to in vivo and in vitro studies involving innovative technologies and materials, such as digital equipment, CAD-CAM systems, robot dentists, Artificial Intelligence (AI) and Robotics, natural dental products, custom implant using threedimensional printing (3DP), high-tech radiology, and new techniques and materials for functional and aesthetic facial and dental rehabilitations.

We especially welcome interventional studies aiming at improving the knowledge of new techniques/advances in clinical dentistry. Studies incorporating new clinical approaches or providing novel information are of higher priority. Reviews including studies using conceptual frameworks on any of the aforementioned topics will also be welcomed.
