Message from the Guest Editors

Dear Colleagues,

Pancreatic surgery (PS) is one of the most technically challenging kinds of surgery. Several surgical techniques and different anastomosis for the reconstruction of the digestive system have been performed over the years. PS has been adapted to treat different pancreatic diseases. Various factors influence cancer recurrence, morbidity and mortality after PS. The most common and clinically relevant complications are related to pancreaticojejunal anastomosis. The choice between neoadjuvant therapy and upfront surgery is debated, in particular in case of vascular reconstruction. Resectability criteria, absolute and relative contraindications to PS are re-evaluated in the light of new scientific evidence. There are still many unanswered questions and further studies are needed to better manage and treat surgical patients with pancreatic disease. The scope of this Special Issue is to provide an overview of the global advancement of surgical research and clinical practice in the field of PS. Therefore, researchers in the field of PS are encouraged to share their experiences and discuss surgical approaches, submitting an original article or review to this Special Issue.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
