Message from the Guest Editor

Patients usually suffer after operation. Acute postoperative pain is one of the most feared complications by the patients. Postoperative pain, especially when poorly controlled, results in harmful effects such as adverse physiologic responses. Besides, a variable portion (5%–85%) of acute postoperative pain converts to chronic pain, which is a devastating outcome after surgery. Because chronic pain is difficult to treat, and is often persistent, efforts should be made to prevent the development of chronic pain after surgery. To do so, pathophysiology of postoperative pain (acute or chronic) should be understood, a variety of treatment options should be evaluated, and preventive measures of chronic postoperative pain need to be established. Proper managements of postoperative pain are essential to safe and rapid recovery after operation. Please join us in presenting this Special Issue on the up-to-date research currently being performed on postoperative pain in different academic fields to improve postoperative care of surgical patients.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
