

## Special Issue

# Cesarean Section Versus Vaginal Delivery

### Message from the Guest Editors

With respect to vaginal birth, new labor induction methods have been developed to reduce the rate of cesarean sections.

Ultrasound has become an increasingly valuable tool, both in assessing cervical readiness through elastography and in evaluating labor progression.

Dynamic parameters such as the angle of progression, head–perineum distance, and fetal position can help

estimate the likelihood of successful vaginal delivery or the need for cesarean section. Indications for cesarean

delivery have evolved as well. Some are now applied excessively, often due to medicolegal concerns. Thus, malpractice related to labor and delivery management is

also a relevant theme for this Special Issue. Neonatal outcomes following vaginal births—either spontaneous

or assisted—versus cesarean delivery merit further investigation, as do the criteria for labor induction and

cesarean indication in specific clinical scenarios such as previous uterine surgery, fetal growth restriction,

abnormal presentations, placenta accreta spectrum, and vasa previa. Psychological changes induced by

childbirth and their subsequent effects over time represent another important topic worthy of further

exploration.

## About the Journal

### Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
