# Chronic Complications of Diabetes: Prevalence, Prevention and Management

### Message from the Guest Editor

The scale of the chronic complications of diabetes became clear in the late 1920s and 1930s, when detailed descriptions of the syndrome were first made. These include tissue complications, microvascular diseases (retinopathy, nephropathy, and neuropathy), and macrovascular diseases (atherosclerosis). There is strong evidence that microvascular disease is related to the duration and severity of hyperglycemia in both type 1 and type 2 diabetes. At present, there are specific treatments to slow the progression of established nephropathy, preserve vision in those with established retinopathy, and decrease the chance of neuropathy leading to foot damage. Macrovascular disease affects the coronary arteries, cerebral circulation, and peripheral vessels, and the risk of heart failure is considerably increased among patients with diabetes, in addition to being associated with substantial morbidity and mortality. In recent years, major advances have occurred in our understanding of the pathogenesis of diabetic complications. Major theories regarding the development of complications are based on metabolic and vascular changes.

## About the Journal

### Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

### Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000  
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
