Recent Progress in Multiple Sclerosis and Migraine

Message from the Guest Editors

Multiple sclerosis (MS) and migraine are chronic and progressive neurological diseases that affect millions of people worldwide. Despite recent advancements in understanding the disease, there is still a need for continued research to improve diagnosis and treatment options. Diagnosis and assessment of MS and migraine, including imaging techniques, clinical diagnosis, and laboratory tests. We invite experts and professionals from various fields to submit original research articles and review papers related to multiple sclerosis and migraine. The scope of this journal edition will include but is not limited to

- Diagnosis and assessment of MS and migraine, including cerebrospinal fluid analysis, imaging techniques and clinical diagnosis;
- Novel and emerging therapies for MS and migraine, such as disease-modifying drugs and symptom management techniques;
- Multidisciplinary approaches to managing MS and migraine, including rehabilitation, psychological support, and lifestyle interventions.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
