

## Special Issue

# Current and Emerging Treatment Options in Sinus and Nasal Diseases

### Message from the Guest Editors

Sinus and nasal diseases affect billions of people in the world, and account for more than one million outpatient visits a year, resulting in countless time lost. In the past, sinus surgery was invasive, often performed through external incisions, and thus was associated with significant pain. Today, a range of emerging skills have been applied in clinical practice, providing doctors with new insights and methods to treat this kind of disease. The purpose of this Special Issue is to review current advances and controversies in the treatment of patients with sinus and nasal diseases, the effects of treatment on a patient's quality of life, and the expansion of surgical and other approaches to sinus and nasal diseases.

## About the Journal

### Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
