

Special Issue

Older Patients: Clinical Challenges in the Hospital Acute Care Units and in the Sub-intensive and Intensive Care Settings

Message from the Guest Editor

This Special Issue aims to explore the clinical challenges that healthcare professionals who care for older patients in acute care units, sub-intensive care units and intensive care settings face. The aging population is rapidly increasing worldwide, leading to a growing number of older adults requiring hospitalization. Older patients often suffer from more complex medical conditions and are at increased risk for adverse outcomes, such as prolonged hospital stays and higher mortality rates. This Special Issue offers valuable insights into the latest research and clinical practices for managing older patients in these settings. The articles included cover topics such as the management of delirium, fall prevention, geriatric pharmacology, team communication, and end-of-life care.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
