Craniofacial and Reconstructive Plastic Surgery

Message from the Guest Editor

Craniofacial surgery represents a complicated challenge for surgeons, especially due to the impact of the face region on individuals' social life. The pathologies that may require craniofacial surgery are innumerable; just think of the global burden of birth defects, such as clefts and craniostenosis, that involve a team of various specialties. However, the challenges are not limited to congenital and malformation surgery in this Special Issue, and we must also consider traumatic pathologies and reconstructive surgery after tumor exision. The restoration of masticatory, swallowing and phonatory functions is essential in order to enable the patient to continue a normal life, without neglecting the importance of achieving a good aesthetic result. In this Special Issue, we welcome authors to submit papers on the new surgical and aesthetic techniques aimed at restoring facial functions and aesthetics for patients suffering from pathologies of the craniofacial district. We look forward to receiving your submissions to this Special Issue.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
