New Advances in Hip and Knee Reconstructive Surgery

Message from the Guest Editor

Today, knee and hip surgery are among the most successful surgical procedures. Nonetheless, the number and severity of associated complications are still of clinical concern, with periprosthetic joint infection (PJI) being a disastrous complication after hip and knee replacement surgery. The design and implementation of surgery, as well as the overall diagnosis and treatment of postoperative infectious complications, material failure, prosthetic loosening, and joint instability, etc., have been the subject of intensive research to understand, prevent and treat the diseases associated therewith. Rehabilitation training also has very important clinical significance for the postoperative functional recovery of patients. This Special Issue aims to invite authors to submit original papers or review articles on specific and novel approaches to knee and hip problems, providing readers with the latest research results.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67081
Strasbourg, France
