Current Applications of Contrast-Enhanced Ultrasound Imaging in Kidney Lesions

Message from the Guest Editors

The widespread use of abdominal imaging over the last few decades has increased the early detection of kidney lesions. Contrast-enhanced ultrasound (CEUS) allows a dynamic functional imaging of tumor perfusion, offering new diagnostic perspectives compared to traditional US B-mode or color Doppler investigation. The advantages of using microbubble contrast agents in renal disorders have been largely documented in the literature. In 2008, CEUS was adopted by the European Federation of Societies for Ultrasound in Medicine and Biology (EFSUMB) due to its renal indications. In fact, no approved US contrast agents have renal excretion, and renal insufficiency is not a contraindication for their use. Moreover, recent studies showed that CEUS can be used to differentiate among lesions with an equivocal enhancement at CT or MRI, suggesting its potential role in the evaluation of renal lesions that deserve further investigation. The present Special Issue aims to highlight the benefits of using CEUS, as a cost-effective and non-invasive method not requiring the use of ionizing radiation, in the diagnosis of kidney lesions and during the follow-up of non-surgical lesions.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67081
Strasbourg, France

Prof. Dr. Kent Doi

Department of Emergency and Critical Care Medicine, The University of
Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
