Chronic Pain: The Role of Regional Anesthesia

Message from the Guest Editors

Chronic pain poses a major challenge for physicians. It leads to a lower quality of life, with patients requiring prolonged hospitalization and medical attention; moreover, the available medical treatment may not effectively treat the pain. However, in recent years, regional anesthesia has made considerable progress thanks to factors such as improved technology, better anatomical knowledge, and high research interest leading to multiple scientific publications on the topic. The role of regional anesthesia in chronic pain is fascinating, owing to its ability to mitigate or resolve such pain with focused therapy in addition to the usual multimodal strategy. However, research is still lacking, especially on newly described techniques such as interfascial plane blocks, when considering the role of regional anesthesia in chronic pain. The aim of this Special Issue is to highlight recent advances in the context of treatment and the prediction of prognoses in regional anesthesia for the treatment of chronic pain in gastrointestinal disorders. We welcome all submissions, and are especially interested in receiving original randomized or observational trials and reviews.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
