Technological Innovations in the Prosthetic Field: How to Improve Old Procedures and Integrate Them with New Ones

Message from the Guest Editors

The creation of mobile and fixed dental prostheses represents a fundamental chapter of rehabilitation dental medicine. Today, technological and digital applications aim to create increasingly assisted procedures, with the goal of designing repeatable and predictable therapeutic protocols to allow the dentist increasingly precise and simplified procedures with a significant reduction in human error. This Special Issue will collect manuscripts describing new procedures and new therapeutic approaches in order to optimize the results obtainable in both fixed and removable prostheses.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
