

Special Issue

Utilizing Technology Solutions and Novel Medications in the Prevention, Diagnosis, and Management of Diabetes Mellitus

Message from the Guest Editors

The prevalence of diabetes mellitus (DM) is rising globally, currently affecting more than 422 million people worldwide. The consequences of DM include macro-vascular and micro-vascular complications, which contribute to increased morbidity, mortality, and higher hospital costs. In this Special Issue of the *Journal of Clinical Medicine*, we aim to collate research papers that expand our knowledge on the use of technology and novel medications for the prevention, diagnosis, and management of DM. We welcome submissions of clinical intervention studies, observational real-world studies and meta-analyses, as well as studies reporting patients' outcomes. We look forward to your submissions. **Keywords:** diabetes mellitus; continuous glucose monitoring; diabetes management; technology solutions

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
