Psychogerontology: Psychological Insights into Aging

Message from the Guest Editors

The population of older people is increasing rapidly around the world. This phenomenon has become one of the most significant social transformations of the twenty-first century, requiring adaptations to how societies are structured in all sectors. In this context, understanding late adulthood and aging processes has become a major priority of current scientific research, with the clinical and psychological aspects of the psychogerontology field becoming increasingly relevant as populations age. This Special Issue aims to publish articles that significantly advance knowledge in the clinical and research aspects of the psychogerontology field, with a special research interest that addresses the clinical, cognitive, psychological, behavioral, and sociocultural aspects of the aging process, as well as psychological development and change throughout adulthood and old age in diverse contexts.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
