

## Special Issue

# Clinical Management of Corneal Diseases

### Message from the Guest Editor

We are pleased to announce a new Special Issue entitled “Clinical Management of Corneal Diseases”, aimed at highlighting the rapid advancements and evolving practices in the diagnosis and treatment of corneal disorders. In recent decades, there has been an explosion of innovative treatment modalities, driven by remarkable technological advancements and improved diagnostic tools, revolutionizing the way clinicians manage a wide range of corneal conditions. This Special Issue welcomes the submission of original research articles and reviews that address various aspects of corneal care, including corneal transplantation, endothelial keratoplasty techniques such as DMEK and DSAEK, keratoprosthesis, surgical innovations such as intracorneal ring segments (ICRS, CAIRS) and Bowman layer transplantation, and diverse corneal crosslinking protocols, which continue to refine and expand the treatment of keratoconus and other ectatic disorders. We also encourage submissions that focus on treatment outcomes, clinical decision-making, and evidence-based management strategies.
