Assessment and Treatment of Trauma Patients

Message from the Guest Editor

The fast developments in the treatment of trauma patients are remarkable. Therapeutic indications have expanded steadily, and new therapies that have never existed are being developed and implemented. In particular, the advancements of prehospital application of blood products and haemostatics have become a crucial part in therapy. Furthermore, standardized clinical approaches and treatment protocols have been implemented in order to improve the patient's outcome. Hence, interventional EUS has revolutionized endoscopic treatment for pancreaticobiliary disease. In this Special Issue, we welcome authors to submit papers on the clinical assessment and treatment of trauma patients with a special focus on novelties and new therapies. We would highly appreciate your contribution and are looking forward to your submission.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
