New Insights in Joint Arthroplasty—2nd Edition

Message from the Guest Editor

Total joint arthroplasty has been described as one of the most important and successful orthopedic interventions for patients with end-stage osteoarthritis of the joint.

Recent developments in hip and knee arthroplasty have aimed to improve outcomes, reduce complications, and improve implant survival. This Special Issue aims to summarize some of the most interesting trends and developments in this important and fast-moving field.

Notable developments include modern ceramic materials, mini hip stems, and the wider use of the dual mobility articulation for hip arthroplasty, taking into consideration the spinopelvic relationship and cementless knee replacement. Advances in additive manufacturing and the surface modification of joint replacements offer increasing options for more challenging arthroplasty cases.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
