Pregnancy Complications and Maternal-Perinatal Outcomes

Message from the Guest Editor

Pregnancy is a dynamic and complex physiological process that can be affected by a wide range of maternal and fetal complications. Conditions such as gestational diabetes mellitus (GDM), preeclampsia, fetal growth restriction (FGR), and other high-risk pregnancy factors continue to represent major causes of maternal and perinatal morbidity and mortality worldwide. The aim of this Special Issue is to gather high-quality original research articles, systematic reviews, and clinical studies focusing on the clinical pathophysiology, diagnosis, prevention, and management of pregnancy-related complications. Particular attention will be given to studies exploring the role of the placenta, maternal metabolic status, and the use of ultrasound and other diagnostic tools in monitoring maternal and fetal health. We welcome submissions that enhance the understanding of mechanisms underlying high-risk pregnancies and that propose innovative strategies to improve outcomes for both mothers and newborns.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
