Clinical Updates on Knee and Hip Arthroplasty

Message from the Guest Editors

Knee and hip arthroplasty remains the most effective intervention for patients with advanced osteoarthritis or joint trauma. This procedure provides significant pain relief, improves mobility, and enhances the quality of life for millions of individuals worldwide. However, as the number of patients requiring knee and hip arthroplasty continues to rise, so too does the need for continuous updates on clinical practices, innovations, and challenges in these areas.

This Special Issue, "Clinical Updates on Knee and Hip Arthroplasty", aims to present a comprehensive overview of the latest developments in the field, highlighting both advances in surgical techniques and emerging challenges that clinicians face. The issue will explore a range of topics critical to optimising patient outcomes

By bringing together the latest evidence and expert insights, this Special Issue will provide a valuable resource for orthopedic surgeons, rehabilitation specialists, and healthcare professionals involved in the care of knee and hip arthroplasty patients.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
