

## Special Issue

# Innovations in Infertility Treatment and Assisted Reproductive Technologies (ARTs)

### Message from the Guest Editor

Infertility affects millions of individuals and couples on a global scale, posing not only medical challenges but also significant emotional and psychological burdens. Recent advances in infertility treatment and assisted reproductive technologies (ARTs) have revolutionized the field, offering hope and improved outcomes for patients. Thus, the aim of this Special Issue is to highlight cutting-edge innovations in diagnostic methods, treatment protocols, and laboratory techniques that are shaping the future of reproductive medicine. Topics of interest include, but are not limited to, novel ovarian stimulation protocols, advancements in in vitro fertilization (IVF), cryopreservation, preimplantation genetic testing, and emerging technologies such as artificial intelligence in embryo selection. By bringing together original research, clinical studies, and expert reviews, this Special Issue will provide a comprehensive overview of the latest developments in the field, with the goal of enhancing clinical practice and improving reproductive outcomes for patients across diverse populations.
