Clinical and Procedural Update on Transcatheter Aortic Valve Replacement (TAVR)

Message from the Guest Editors

Transcatheter aortic replacement (TAVR) has revolutionized the treatment of aortic stenosis. Recently, successive improvements in transcatheter heart valve systems and growing experience in the field have led to a minimalist procedure, with a progressive reduction in periprocedural complications and death. However, there is still room for improvement in several aspects of the TAVR procedure. First, conduction disturbances such as high-degree atrioventricular block requiring permanent pacemaker implantation and new-onset left bundle branch block remain the most frequent drawback of the procedure. Additionally, the risk of paravalvular leak remains higher in TAVR compared to surgical aortic valve replacement. Other important aspects include periprocedural stroke, management of coronary artery disease before and after the procedure, choice of intervention in patients with small aortic annulus, antithrombotic treatment after the procedure, and very long-term durability (>5 years). This Special Issue will address several unresolved questions, including those involving clinical and procedural aspects. Both original research articles and state-of-the-art reviews are welcome.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
