

## Special Issue

# New Clinical Advances in Psoriasis and Psoriatic Arthritis

### Message from the Guest Editors

Psoriasis is a common, chronic, inflammatory, immune-mediated skin disease with a high prevalence worldwide. It is a chronic, relapsing–remitting, inflammatory autoimmune disease involving several factors. The complexity of psoriasis is also reflected in the comorbidities that accompany psoriasis, mainly affecting the skin and joints. Recent therapeutic advances in psoriasis and psoriatic arthritis are compelling. We now have multiple options for treating the patient in front of us, but this also creates the dilemma of making the right treatment choice. This Special Issue aims to accumulate the latest reviews and original articles on psoriasis and psoriatic arthritis, with the aim of exploring the latest developments in all aspects of psoriasis and contributing to decision-making in our daily medical practice.

## About the Journal

### Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
