

## Special Issue

# Clinical Advances in Neurorehabilitation

### Message from the Guest Editors

Medicine and neurorehabilitation are experiencing an era of change due to the exponential development of artificial intelligence and the ever-increasing presence of robotics in medical practice. Nevertheless, doctor–patient and therapist–patient relationships are still at the center of medicine, and consolidated rehabilitation techniques remain the cornerstone of many rehabilitation treatments. The aim of this Special Issue is to explore how new possibilities dictated by technical development can impact neurorehabilitation practice.
