Clinical Comparisons of Nonpharmaceutical and Pharmaceutical Analgesia

Message from the Guest Editors

Pain is a very common phenomenon experienced by humans, but situations that require intentional pain control often occur. Acute or chronic pain and postoperative pain caused by disease are mostly controlled using medication, but there do exist non-pharmaceutical methods. Therefore, this Topical Collection aims to provide a clinical comparison of various non-pharmaceutical and pharmaceutical analgesia. In addition, the clinical comparison of pharmaceutical analgesia would include not only comparisons between drugs, but also with other tools and interventions, as well as assessments of the effectiveness of drugs delivered through various drug delivery methods. In other words, clinical evaluations of any method used in analgesia are welcome.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr s

Internal Medicine Department, University Hospital Strasbourg, 67000
