

Joint Special Issue

Advances in Gynecological Diseases

Message from the Guest Editor

This Special Issue, entitled “Advances in Gynecological disease”, will focus on the latest diagnostic and therapeutic techniques that enable adequate treatment of gynecological pathologies. Technological innovations and new diagnostic techniques allow increasingly precise and faster diagnoses to be performed. Technological and pharmacological innovations, combined with the use of minimally invasive surgery (hysteroscopy, laparoscopy and robotic surgery), have also enabled increasingly precise and tailored therapy to be introduced. You may choose our [Joint Special Issue](#) in *JERPH*.
