Special Issue

Platelets and the Antiplatelet Drugs: From Bench to Bedside and Back

Message from the Guest Editor

Circulating platelets, in particular those with hyperactivity, play an essential role in the initiation and progression of thrombotic vascular diseases, such as coronary artery disease and ischemic stroke. Thus, antiplatelet drugs are widely used for the prevention of all thrombosis-associated vascular diseases.
This Special Issue of the Journal of Clinical Medicine, titled “Platelets and the Antiplatelet Drugs: from bench to bedsite and back”, will focus on recent advances in basic research and clinical studies of platelets and the antiplatelet drugs (marketed or in the pipeline), all of which lie in the scope of the above-designated title. Contributions on these and related topics are welcome, including original papers and review articles.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine*'s (*JCM*) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
