Abdominal Hernia Repair: Current Strategies for the Management of Abdominal Wall Hernias

Message from the Guest Editor

Abdominal wall hernia surgery is one of the most common operations performed by general surgeons. New strategies for the repair of these hernias, combined with recently introduced platforms such as robots, in addition to laparoscopic and open procedures, necessitate a periodic review of such techniques and their outcomes. In this Special Issue, we invite authors to discuss their experiences with abdominal hernia repair and compare their results to the current literature. We welcome reviews of current approaches and their outcomes, and will also consider accounts of unusual cases of hernias accompanied by a literature review. Papers detailing innovative approaches are most likely to be fast-tracked for publication in this special edition. I look forward to your contributions.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
