

## Special Issue

# Clinical Management of Multiple Sclerosis

### Message from the Guest Editors

Recent advances in therapeutic interventions in multiple sclerosis have significantly enhanced disease management and the quality of life for patients. Future perspectives entail the systematic documentation of comorbidities in this population, the exploration of the potential drug interactions with these comorbid conditions, and subsequently the relationship between the presence of comorbid conditions and disability progression. This Special Issue of the *Journal of Clinical Medicine* welcomes commentaries, original research and reviews focusing on the advances in research, diagnosis monitoring and treatment of multiple sclerosis and other demyelinating disorders. This Special Issue aims to enrich the current literature on the advances in phenotyping people with demyelinating disorders and comorbid conditions, personalised treatment strategies, and the systematic recording of these conditions.

## About the Journal

### Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
