

Special Issue

Targeted Therapy for Cardiac Arrest and Sudden Cardiac Death

Message from the Guest Editors

Sudden cardiac death and cardiac arrest in general are a huge challenge for healthcare systems worldwide on the one hand and a great opportunity for benchmarking systems and improving standardized patient care on the other. Novel developments, such as improvements in CPR or prognostication, or ongoing conflicting topics, such as the worth of eCPR programs, keep the field of resuscitation medicine and science exciting. In late 2025, new CPR guidelines will be published by respective organisations; this is an opportunity to conduct research efforts that will potentially still be considered there. The aim of this Special Issue is to gather upcoming evidence in all fields of resuscitation care and to provide a platform for authors to display their findings. We encourage young and seasoned researchers, small and large groups, and people from low- and high-income regions to submit their cutting-edge research on resuscitation to this Special Issue, and we will be glad to evaluate your original research and reviews.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
