Clinical Diagnosis and Rehabilitation of Pulmonary Hypertension and Pulmonary Embolism

Message from the Guest Editors

Pulmonary hypertension (PH) is a hemodynamic condition characterized by an increase in pressure in the pulmonary artery secondary to various pathological conditions. Accurate diagnosis and the correct clinical framing of PH are prerequisites for adequate treatment able to improve not only the symptoms and quality of life but also the survival rates of patients. Studies on the recent advances in PH and PE diagnosis and management are welcome for this Special Issue. We are also inviting researchers, physicians, and clinical scientists to submit their manuscripts with the goal of advancing the knowledge and understanding where we currently stand on rehabilitation in the PH and PE.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
