Current Trends in Bone Augmentation Techniques and Dental Implantology

Message from the Guest Editors

The use of dental implants is a routine procedure with predictable outcomes in modern dentistry. Often, alveolar ridge defects do not allow a predictable and driven implant placement.

Different therapeutic options have been described to reconstruct these defects. GBR, among all these, seems to improve the predictability of bone augmentation and provides long-term stability to the newly augmented site.

One of the most challenging aspects is related to the healing phase, especially when associated to early exposures of the membranes or the titanium meshes; thus, efforts, aside from correct surgical management, are currently focused on finding the best materials for correct biological integration and instruments/devices which may improve the healing period.

In addition to this important timing, the prosthetic plan also plays a strategic role, and current trends on digital techniques are able to minimize the risks related to the manual phase of the impression and the technical workflow.

The aim of this Special Issue is to highlight recent advances in the context of diagnosis, treatment, and the prediction of prognosis for various bone augmentation techniques and their healing.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
