New Perspectives in Oral Health for Patients with Special Needs and Compromised Older Adults

Message from the Guest Editors

Dentists worldwide need to recognize the factors and be prepared to prevent, diagnose, and treat the consequences of ROHD among the growing older adult population. At the same time, further research on the relationship between ROHD and the general health of older adults (disease, hyponutrition, frail, etc.), prognosis, and quality of life is needed. Interdisciplinary research is expected to lead to more efficient and effective health promotion measures. We welcome not only reports from clinical practice, but also research with a broad social perspective, or interdisciplinary and challenging efforts in this Special Issue. We hope to share a new perspective on the oral health of older adults. **Topics will include:**

- The interrelationship between systemic health factors and ROHD among older adults
- Oral health factors related to ROHD among older adults
- Socio-economic factors related to ROHD among older adults
- Preventing, diagnosing, and treating ROHD among older adults
- Novel and Interdisciplinary approach to ROHD among older adults
- Impact of ROHD on the quality of life (QOL)
