

Special Issue

Targeted Diagnosis and Management of Traumatic Brain Injury

Message from the Guest Editors

Traumatic brain injury is a major public health concern, affecting millions of people worldwide each year. This issue covers a wide range of topics, including prehospital care, emergency department management, neuroimaging, and rehabilitation. The articles are written by leading experts in the field and provide valuable insights into the latest techniques and technologies used in traumatic brain injury diagnosis and management. We also seek to explore the challenges and opportunities in the field, including the use of biomarkers for diagnosis and prognosis, the role of neuroimaging in identifying and novel neuromonitoring brain injury, and the development of targeted rehabilitation protocols to improve outcomes for patients. This Special Issue will be of interest to neurologists, neurosurgeons, emergency medicine physicians, intensivists, rehabilitation specialists, and other healthcare professionals involved in the care of patients with traumatic brain injury.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
